

Dr. John and Ingrid Reyes of Modern Ob/Gyn are providing outstanding care for their patients at their Johns Creek office. Since establishing their two-physician private practice, they have continued to be an active part of the community and are helping women of our area with issues ranging from pregnancy and delivery to management of complex gynecologic and surgical issues.

One of the unique advances this team provides to the women of Johns Creek and surrounding communities is the use of the da Vinci robotic surgical system. This computer-enhanced surgical system is cutting edge technology in surgical options. One of few select practices offering this type of surgery in Atlanta, Modern Ob/Gyn continues its passion and dedication for bringing the best medical therapies to their patients.

“The da Vinci robotic system is a minimally invasive surgical option that allows me to be a better surgeon for my patients. The da Vinci robot is really just an extension of the surgeon. It allows for more precise and delicate movements that really gives patients better results. It’s a great option for many patients, especially those who have had previous pelvic or abdominal surgery, or most importantly for infertility patients suffering from endometriosis or uterine fibroids. Through a few small incisions on the abdomen, we are able to perform challenging and complex surgeries with great outcomes for our patients. Typically, patients can expect less pain, less scars, a shorter stay in the hospital, and a faster recovery time. The majority of our patients go home after robotic surgery the same night or the next morning and don’t require any prescription pain medication. It really is amazing what we are able to do with minimally invasive surgeries, especially the da Vinci robot, and see the patients have such great outcomes,” says Dr. Ingrid Reyes. “It’s very rewarding.”

Dr. John Reyes

Dr. Ingrid Reyes

Being one of few practices in the Atlanta area, and the only practice based in Johns Creek offering robotic surgery, Modern Ob/Gyn stands by its promise to bring the most advanced and sophisticated options to this community.

“We are here to do our very best for the women of this community. This is why we went to school and trained for so long—we really value the work we do and how we can help our patients. It’s a blessing to be able to do minimally invasive and robotic surgeries on patients suffering from long-standing issues such as infertility from endometriosis, fibroids, or pelvic adhesive disease. Afterwards, we can help them become pregnant, and come full-circle to care for them during their pregnancy and delivery. It’s the full spectrum of caring for what’s so important to a woman’s life—her health and her family...that’s the best part,” says Dr. John Reyes.

Modern Ob/Gyn’s husband and wife team of Dr. John and Ingrid Reyes provide comprehensive women’s care ranging from adolescents through menopause for issues such as heavy or irregular cycles, uterine fibroids, ovarian cysts, endometriosis, routine and high risk pregnancies.

Modern Ob/Gyn is in the Emory Johns Creek Hospital Physicians Plaza located at 6335 Hospital Parkway, Suite 204 in Johns Creek. You can read more about Dr. John and Dr. Ingrid Reyes at their website, www.reyesobgyn.com or call their office at: 404-446-2496. They are currently accepting new patients.
